

At the 27 institutes and 25 clinical centers of Jena University Hospital, the scientists and physicians work both in the fields of fundamental biomedical research and in patient-related clinical research. Therein two foci of research have grown. Concentrating on this profile but also covering the broad range of clinical research, the Interdisciplinary Centre for Clinical Research is a proven instrument for promoting young researchers and internal initial funding of research groups.

In 2014, scientist at the school of medicine raised an amount of 24.5 Mio Euro of Third-party funds for research projects. For a complete review of research at the Jena University Hospital see our research report.
